

CONTENTS

Preface	V	2.9.3.2 Strong stabilization mechanism.....	2-39
List of Abbreviations & disclaimer	XIII	2.9.3.3 Analytical presentation of the frequency stabilization effect.	2-40
Chapter 1. Introduction	1-1	2.9.4 SPM vector affected by external electrical field	2-42
Chapter 2. Matter, space and fields	2-1	2.9.5 SPM frequency for node energy between E_{c1} and E_{sc}	2-43
2.0 Criteria for successful unified theory.....	2-1	2.9.6 Method of separation of intrinsic interaction processes contributed by the central or peripheral twisted part of the prisms.	2-43
2.1. Alternative concept about the physical vacuum and structure of elementary particles.....	2-1	2.9.6.A Oscillating velocity distribution of the CL node	2-45
2.2 Basic definitions and physical laws.	2-5	2.9.6.B Fine structure constant as embedded feature of the twisted prisms	2-45
2.3 Gussed property of the intrinsic matter	2-8	2.9.7 Summarized features of the Cosmic Lattice space	2-46
2.4 Inertia of objects made of intrinsic matter in a classical void space.	2-10	2.9.8 Static and dynamical features of the rectangular lattices	2-46
2.5 Dynamical interactions between spatially ordered prisms	2-12	2.10 Disturbance of the CL space surrounding the helical structures.	2-46
2.6. Gravitational lattices in classical void space.	2-13	2.10.1 Electrical charge and electrical field ..	2-46
2.6.1. Types and general properties of the gravitational lattices	2-13	2.10.2 Interaction between particles, possessing a charge.	2-48
2.6.4 Boundary and interface layers	2-18	2.10.3. Node quasisphere behavior in a permanent magnetic field	2-50
2.7. Helical structures and ordered systems ..	2-19	2.10.4 Quantum electromagnetic wave	2-52
2.7.A Identification of the atomic and subatomic particles	2-23	2.10.5 Boundary conditions for the wave equation	2-61
2.7.A.2 Primary particles. Identification of atomic and subatomic particles.	2-23	2.10.6 Propagation of quasiparticle waves (virtual particles).	2-62
2.7.A.2.1 Electron system (electron structure) 24		2.10.7. Gamma rays as a bunch of quantum waves	2-65
2.7.A.2.2 Protoneutron and its internal structure. Conversion to proton or neutron.	2-24	2.10.8 Trapping mechanism of rectangular lattice inside the helical structures.	2-66
2.8 Modified rectangular lattice in the internal space of the helical structures	2-26	2.11 Light velocity in CL space	2-69
2.8.1 General features	2-26	2.11.3 Light velocity equation and relation between the CL space parameters and the fundamental physical constants.	2-75
2.8.2 Trapping hole.	2-28	2.12 Relation between the intrinsic and the inertial mass of the CL node.	2-81
2.8.2.A. Stiffness of internal RL structure and its influence on the external structure radius	2-28	2.13 Physical meaning of the Planck's constant, by using the basic parameters of CL space..	2-81
2.8.3 Helical structures in different space environments	2-29	2.13.A. ZPE uniformity and CL space relaxation time constant.....	2-82
2.8.4 Helical structure with internal RL in a classical void space	2-32	2.14. Basic measurable parameters of the CL space.	2-85
2.8.5 Intrinsic mass contained in the first order helical structure with internal lattice.....	2-32	2.15. Gravitational law in CL space	2-87
2.8.6. Mixed rectangular lattice in a spherical space	2-32		
2.9 Dynamic property of the Cosmic Lattice ..	2-33		
2.9.1 Node configuration of CL structure	2-34		
2.9.1.1 Conditions for stable lattice	2-34		
2.9.2 Node oscillations described by vectors. 2-37			
2.9.3 Resonance frequency stabilization	2-38		
2.9.3.1 Weak stabilization mechanism	2-39		

CONTENTS

2.15.0. Mass - energy - charge equivalence principle.	2-88
2.16 Confined motion of the helical structures in CL space.	2-91
2.17 Basic CL space parameters and connections to some fundamental properties of matter.....	2-93
Chapter 3. Electron. Structure and physical parameters	3-1
3.1 Electron structure and basic features.....	3-1
3.2 Electron oscillations and lattice pumping effect leading to a photon emission.	3-5
3.3 Confined motion of the electron. Electron spin.	3-7
3.4 Electrical field of the electron at confined motion	3-8
3.5 Dynamical properties of the electron in confined motion	3-12
3.6 Dimensions of the electron.	3-16
3.7 Interaction between the moving electron and the external electrical field	3-18
3.8 Interaction between a moving electron and an external magnetic field	3-18
3.9 Quantum motion at optimal and suboptimal velocities. Quantum velocities.	3-19
3.10 Magnetic moment, gyromagnetic factor and Quantum mechanical spin of the moving electron	3-25
3.11 Quantum magnetic radius of electron....	3-27
3.11.A. Relativistic motion of electron. Relativistic gamma factor and quantum efficiency.	3-31
3.12 Quantum loops and orbits	3-33
3.12.1 Quantum loop conditions	3-33
3.12.2 Quantum loops and orbits for electron with an optimal confined velocity. Embedded signature of the fine structure constant.	3-34
3.12.2.A. Quantum orbits and time duration for a stable orbit	3-38
3.12.3 Quantum loops and orbits, for electron with any suboptimal quantum velocity	3-39
3.13 Estimation of basic CL space parameters by the parameters of the electron system. Derivation of the mass equation.	3-40
3.13.1 Physical interpretation of inertial mass ratio	3-40
3.13.2 Relation between CL node displacement from FOHS and the Broglie wavelength	3-41
3.13.3 Static CL pressure and apparent (Newtonian) mass of the helical structures	3-41
3.13.4. Physical nature of inertia and inertial mass	3-44
3.14. Free positron. Newtonian mass and Planck's constant estimated by its motion in CL space.....	3-45
3.15 Dynamic pressure of CL space	3-45
3.16 Scattering experiments for electron and positron from the point of view of the BSM theory.	3-46
3.17 Positronium	3-47
Chapter 4. Superconductive state of the matter.	4-1
4.0 CL space inside of a solid body	4-1
4.1. Normal and superconductive operational mode of CL node.	4-2
4.2 The electron system configurations in superconductive environments	4-5
4.3. Integer and Fractional Quantum Hall Effect experiments.	4-10
4.4 QHE and FQHE experiments as examples of active control of light velocity in a sample	4-13
4.4.1 General considerations	4-13
4.4.2 Signature of the oscillating electron in the Integer quantum Hall effect	4-20
4.4.3 Signature of the SC electron in FQHE ..	4-20
4.4.4 Signature of the stacked SC electrons..	4-21
4.4.5 Scanning the sample SPM frequency and invoking a synchronized quantum effect	4-21
4.4.6 The plateau width as a signature of direct interaction between the moving carriers and the quantum conditions	4-22
4.4.7. Theoretical simulation of a holding effect in the SPM frequency synchronization	4-23
4.4.8 Signature of the SPM vector behavior around the critical energy level E_{c2}	4-25
4.4.9 Signature of the positron in FQHE	4-25
4.4.10 Summary and conclusions	4-29
Chapter 5. Energy of the Physical Vacuum. Hidden space energy.	5-1
5.1. Zero point energy of CL space and its relation to the Cosmic Background Radiation	5-2
5.2. Derivation of expressions about CL space background temperature.	5-2

CONTENTS

5.3. CL space background temperature expressed by the parameters of CL space.	5-4
5.4. Considerations for breakdown of the equivalence principle at internode range distance.	5-4
5.5. Hidden space energy	5-5

Chapter 6. Structure of the elementary particles.6-1

6.1 Atomic and subatomic particles. Conversion processes.	6-1
6.2 Virtual particles (waves)	6-4
6.3 Neutrino particles	6-4
6.4 High energy particle collision	6-5
6.4.1 Braking of the proton and neutron	6-5
6.4.2 Identification of internal structures of the proton (neutron)	6-5
6.4.3 Pions and their decay.	6-7
6.4.4 Experimental evidence for muon shape	6-9
6.5 Neutral pion	6-13
6.6 Infinities in the Feynman diagrams.	6-14
6.7 Eta particle	6-14
6.8. "Antiproton"	6-14
6.9 High energy particle collision	6-15
6.9.1 High energy collision between electron and positron (e^+e^- high energy reaction).	6-15
6.9.3 SG energy embedded in the helical structures and "electroweak forces".	6-18
6.9.4 Theoretical analysis of the embedded SG energy in the elementary particle	6-21
6.9.4.1 Theoretical consideration	6-22
6.9.4.2.1 Asymmetrical reaction of the CL space	6-26
6.9.4.3. Identification of the particle structure by the embedded SG energy released in the particle collision experiments	6-29
6.9.4.4 The real newtonian mass of the kaon	6-32
6.9.4.5 Fermi coupling constant and effective mixing ratio for "leptons"- signatures of the helical structure twisting	6-33
6.10 Physical explanation of the Newtonian gravitation and inertia of the elementary particles	6-34
6.11. Physical dimensions and structure of the proton and neutron.	6-38
6.12 Proton. Structure and physical dimensions	6-38

6.12.2 Cross calculation method for accurate determination of the proton dimensions	6-40
6.12.3 Experimental confirmation about the theoretically determined proton dimensions.....	6-44
6.13 Neutron	6-45
6.13.1 Neutron. Envelope shape and confined motion	6-46
6.13.2 Neutron-proton conversion and virtual particles	6-46
6.13.3 Neutron in Deuteron	6-48
6.13.4 Neutrons in Tritium	6-48
6.13.5 Neutron magnetic moment	6-48
6.14. Nuclear binding energy	6-49
6.14.1 Binding energy between the proton and neutron in the Deuteron system.	6-50
6.14.2 Estimation of the distance between the neutrons in the nucleus of Tritium	6-52
6.14.3 Role of the SG(TP) field in the spatial order of hadrons in the atomic nucleus	6-53
6.15 Neutrino particle classification	6-53

Chapter 7. Hydrogen atom7-1

7.1 Proton as a nucleus of the Hydrogen atom	7-1
7.2 Bohr surface of the Hydrogen atom	7-1
7.3 Coulomb force inside the Bohr surface	7-4
7.4 Orbital planes for the Hydrogen series.....	7-5
7.5 Effect of the orbiting electron on the atomic motion in CL space.	7-7
7.6 Quantum motion of the electron in electrical field. Quasishrunk CL space.	7-8
7.7 Quantum orbit conditions for orbits inside the Bohr surface.	7-9
7.8 Model of the Balmer series	7-13
7.9. Photon emission and absorption. Physical explanation of the uncertainty principle.	7-21
7.10 Fine structure line splitting	7-22
7.11 Pauli exclusion principle. Magnetic fields inside the Bohr surface.	7-23
7.12 Superfine spectral line structure	7-24
7.13 Lamb shift	7-24
7.14 Zeeman and Stark effects.	7-24
7.15 Cross validation of the Hippoped curve concept, used for the shape of the proton and the quantum orbits.	7-25

Chapter 8. Atomic Nuclear Structures

8.1 The Quantum Mechanical models of the atoms are only mathematical models	8-1
---	-----

CONTENTS

8.2 BSM concept about the atomic structure..	8-2	9.5.3 Characteristic features of the molecular oscillations	9-12
8.3 Atlas of Atomic Nuclear Structures	8-3	9.5.4 BSM concept about the oscillations of the molecules with EB type of bonds	9-13
8.3.1 Building rules of the atomic nuclei, related to Z number	8-3	9.5.5. Molecules with I-st type oscillations....	9-17
8.3.2 Natural forces defining the build-up trend of the atomic nuclei of the elements	8-3	9.5.5.1. H ₂ ortho-I state as a simplest diatomic molecule	9-17
8.3.4 The formulated rules must comply to the following:	8-4	9.5.6 Approximate calculation of the system energy in the equilibrium state	9-19
8.3.5 Useful data for unveiling the nuclear structure	8-4	9.5.7 Experimental evidence about the BSM concept of molecular vibrations	9-19
8.3.6 Type of bonds in the atomic nuclear structure	8-4	9.5.8. Mechanism of the Raman scattering and rotational Raman spectra according to BSM .	9-25
8.3.7 Basic rules in the process, leading to build-up of stable isotopes.	8-4	9.6 Vibrational bands of H ₂ ortho-I state.....	9-26
8.3.8 Discussion about the basic rules	8-6	9.7. Theoretical analysis of H ₂ ortho-I molecule oscillations	9-28
8.3.9. Atomic nuclear build-up trends	8-10	9.8 D ₂ ortho-I molecule as a single valence bonding system in the molecules.	9-35
8.4 Experimental data supporting the unveiled atomic nuclear structures	8-13	9.9 Interactions in quantum quasishrunk space	37
8.5 First ionization potential	8-20	9.10. Discussion about the bonding energy at equilibrium and the rotational constants of H ₂ and D ₂ molecules.	9-41
8.6. Atoms at different aggregate state of the matter	8-21	9.11. H ₂ para molecule as a most simple example of diatomic homonuclear molecule with a quasirotational vibration	9-41
8.7. Nuclear magnetic resonance applied for atomic element	8-24	9.13. Molecules (or fractions of molecules) with II-nd type of oscillations.	9-42
8.8. Giant resonance	8-25	9.14. Information about the molecular configuration, using the photoelectron spectrum	9-43
8.9 Scattering experiments	8-25	9.15. SG energy balance for system of diatomic homonuclear molecule	9-44
8.10 Three dimensional view of the atomic nucleus	8-26	9.16. Oxygen molecule in different states... ..	9-48
8.11 Electron series in the atoms at larger Z number	8-27	9.17. NH ₃ molecule	9-51
8.12 Spin orbit interaction	2-27	9.18 Molecules with folded vibrational-rotational spectra	9-52
8.13 Identification of orbits according to QM notation	8-28	9.19 CO ₂ molecule	9-53
8.14 Ions	8-30	9.20. Water molecule	9-54
8.15 Some aspects of photon emission and absorption	8-32		
8.16 Ferromagnetic hypothesis	8-33		
Chapter 9. Molecules	9-1		
9.1 Type of chemical bond	9-1		
9.2 Theoretical modeling of chemical compounds	9-2		
9.3 Concept of integrated Bohr surfaces	9-5		
9.4 Molecular spectra as a signature of molecular oscillations.....	9-6		
9.5 Molecular oscillating model of BSM	9-8		
9.5.1 General considerations and features	9-8		
9.5.2 CL space pumping and radiation (absorption) capability of a bonding electron system	9-11		
		Chapter 10 Time, Inertia and Gravitation	10-1
		10.1 Origin of time	10-1
		10.2 Inertia	10-2
		10.3. Inertial interactions of the atomic matter in CL space	10-5
		10.4 Theoretical analysis of inertia in CL space. Partial CL pressure and force moment	10-11
		10.5 Using the concept of the local CL space and ESS for massive objects	10-20

CONTENTS

10.6 Total energy balance of moving macrobody	10-21
10.6.1 Force moment of real body in a free fall motion	10-22
10.6.2 Anomalous position of Mercury in the plot of the ratio kE as a function of mean radius	10-24
10.6.2.A. Theoretical concept for dynamical equilibrium of moving astronomical object in CL space.	10-25
10.6.5 Energy involved in the motion of astronomical object in gravitational CL space	10-26
10.9 Mass grow of astronomical body by matter accumulation.	10-30
10.12. Interactions between the folded nodes and the planetary atmosphere.	10-31
10.14 Magnetic field hypothesis (for astronomical objects)	10-34
10.15 Physical explanation of the phenomena of General Relativity:	10-36
10.16 Special relativistic phenomena	10-37
10.16.1 Mass increase at relativistic velocity.....	10-37
10.16.2. Relation between the concept of inertial frame (according to SR) and the concept of local CL space (according to BSM)	10-37
10.17. Coriolis force	10-38

Chapter 11. Biomolecules, bioenergy and DNA intercommunication

11.1. New method for analysis of biomolecules with identified structure and composition.	11-1
11.1. General considerations	11-1
11.2. Ring atomic structures in organic molecules.	11-2
11.3 Weak hydrogen bonds	11-4
11.4. Hypothesis of energy storage mechanism in molecules possessing ring atomic structures..	11-4
11.5 Hypothesis of energy flow through the chain structure of the biomolecule.	11-5
11.6. Hypothesis about the role of DNA in the cell cycle synchronization mechanism	11-11
11.7. Established features and experimental results supporting the hypothesis of DNA involvement in a cell cycle synchronization	11-17
11.8. Hypothesis of decoding process in some of the complexes aminoacyl-tRNA synthetases - tRNA.	11-19

Chapter 12. Alternative Cosmology. Stationary Universe and Galactic Cycle

12.A.1. Introduction	12-1
12.A.2. Weak points of Big Bang concept	12-2
12.A.3. Introduction into the BSM concept about the Universe:	12-3
12.A.4. Low level structural organization of the intrinsic matter	12-4
12.A.4.3 Super Gravitation and mass-energy balance of the primordial matter	12-10
12.A.5. Formation of upper order congregations in the surface region of the bulk matter.	12-14
12.A.5.3. Hypothesis of embedded fine structure constant in the lower level structures of matter organization	12-16
12.A.6. Super Gravitational Constant	12-19
12.A.8. Processes of primordial bulk matter of two substances leading to eruption	12-23
12.A.9. Prisms formation	12-26
12.A.10. Summary about important structural features and processes at the lower level of matter organization	12-28
12.A.11. Protogalactic egg and phases of its internal evolution.	12-28
12.B. BSM concept of stationary universe ..	12-37
12.B.1 Recycling and incubation phases	12-38
12.B.2. Galaxy collapse	12-38
12.B.3. Preservation of the information about the prism's matter quantity and handedness	12-39
12.B.4 Variation of diameter to length ratio parameter for prisms from different recycles	12-40
12.B.4.1 Condition for interconnection between CL spaces from different galaxies and galactic recycles	12-40
12.B.4.2 Origin of the Cosmological redshift	12-40
12.B.4.3 Summary	12-47
12.B.5. Phenomena indicating a death (collapse) or a birth of a galaxy in the Universe	12-47
12.B.5.1 GRB without optical counterpart ..	12-48
12.B.5.2 GRB with an optical counterpart ..	12-49
12.B.5.3 Phase of CL space formation. Hypothesis of transition type of CL space.	12-51
12.B.5.4 The observable Universe - a conglomeration of galaxies with interconnected space ..	12-55
12.B.5.5 Galactic nucleus during the phase of recycling and incubation	12-55
12.B.6 Active galactic life	12-57

CONTENTS

12.B.6.1 Some features of evolution after the explosion of the protogalactic egg	12-57
12.B.6.2. Galaxy rotational problem	12-61
12.B.6.3 Some features in the processes of star formations and their evolution	12-63
12.B.6.4 Pulsars	12-69
12.B.6.4.1 Birth of pulsar	12-70
12.B.6.4.2. Idealized model	12-71
12.B.6.4.3 Pulsar's features	12-72
12.B.6.4.4 Energy radiation process and period stabilization	12-73
12.B.6.4.5 Factors involved in the pulsar period stabilization	12-75
12.B.6.4.6 Integrated pulse profile and drifting subpulses	12-77
12.B.6.4.7 Real kaon nucleus	12-78
12.B.6.4.8 Proper motion of the pulsar	12-80
12.B.6.4.9 Pulsars with two opposite jets ...	12-81
12.B.6.4.10. Long relaxation time constant of the pulsar and its signature	12-82
12.B.6.5 Star evolution termination options: a black hole, a binary pulsar, or a supernovae	12-83
12.B.7. Remnants from the previous galactic life	12-87
12.B.7.1 Theoretical concept	12-87
12.B.7.2 Observational data analysis.....	12-89
12.B.7.3 Summary:	12-91
12.B.7.4 Conglomeration of remnants from the previous galactic life	12-91
12.B.7.5 Effect of Globular Cluster (GC) detectability in distant galaxies	12-92
12.B.7.6 Energy loss effect of GC	12-93
12.B.8 Interacting galaxies	12-93
12.B.9 Cosmological anisotropy.	12-94
12.B.10 Crab nebular and pulsar	12-94
12.B.11 Quasars	12-95
12.B.12 Lyman Alpha Forest	12-97
12.B.13 Estimation of cosmological distances	12-98
12.B.13.1 General considerations	12-98
12.B.13.2 Lyman alpha forest method	12-98
12.B.13.3 Theoretical concept of the Universe optical inhomogeneity	12-99
12.B.13.4 Existing methods for determination of cosmological distances independently from the concept of the expanding Universe.	12-100
12.B.13.5 Controversial interpretation of the Hubble law. Recent experimental results...	12-101

12.B.13.6 New interpretation of the Hubble law.	12-102
B. Derivation of the Hubble law from a BSM point of view	12-102
12.B.13.7 Observational evidence about the inhomogeneity of the Universe	12-103
12.B.14. Stability of the Cosmic Lattice structure	12-105

Chapter 13. Potential and special applications of the BSM theory. New opportunities for space travels. 13-1

13.1 Brief summary of advantages of BSM ..	13-1
13.2 Theoretical achievements in support of emerging practical applications	13-2
13.3. Potential applications in different fields of natural science	13-4
13.4. Special applications	13-5
13.4.1. Hidden Space Energy	13-5
13.4.2. How the ZPE-S energy is accessible by the nuclear reaction?	13-6
13.4.3. Alternative methods for accessing the hidden space energy	13-7
13.5. Control of the gravitation and inertia of a solid object	13-10
13.6. Spacecraft based on a new propulsion mechanism	13-12
13.7. Physical effects accompanied the described propulsion mechanism	13-14
13.8. Comparison between BSM predictions and observed physical phenomena	13-14
13.9. Supercommunication	13-15
13.10. Opportunity for interplanetary and interstellar flights	13-16

Atlas of Atomic Nuclear Structures (ANS)...A

Periodic Table of Atomic NucleiB

Appendix to Chapter 2C

Appendix New vision about fusion.....D

Appendix Derived EquationsE
