|  |            |   |      |
|--|------------|---|------|
| Preface .....  | V          | 2.9.3.2 Strong stabilization mechanism.....   | 2-39 |
| List of Abbreviations & disclaimer .....   | XIII       | 2.9.3.3 Analytical presentation of the frequency stabilization effect. ....   | 2-40 |
| <b>Chapter 1. Introduction .....</b>   | <b>1-1</b> | 2.9.4 SPM vector affected by external electrical field .....  | 2-42 |
| <b>Chapter 2. Matter, space and fields .....</b>   | <b>2-1</b> | 2.9.5 SPM frequency for node energy between $E_{c1}$ and $E_{sc}$ .....   | 2-43 |
| 2.0 Criteria for successful unified theory.....  | 2-1        | 2.9.6 Method of separation of intrinsic interaction processes contributed by the central or peripheral twisted part of the prisms. .... | 2-43 |
| 2.1. Alternative concept about the physical vacuum and structure of elementary particles.....        | 2-1        | 2.9.6.A Oscillating velocity distribution of the CL node .....  | 2-45 |
| 2.2 Basic definitions and physical laws. ....  | 2-5        | 2.9.6.B Fine structure constant as embedded feature of the twisted prisms .....   | 2-45 |
| 2.3 Guessed property of the intrinsic matter ....  | 2-8        | 2.9.7 Summarized features of the Cosmic Lattice space .....   | 2-46 |
| 2.4 Inertia of objects made of intrinsic matter in a classical void space. ....                      | 2-10       | 2.9.8 Static and dynamical features of the rectangular lattices .....   | 2-46 |
| 2.5 Dynamical interactions between spatially ordered prisms .....                                    | 2-12       | 2.10 Disturbance of the CL space surrounding the helical structures. ....   | 2-46 |
| 2.6. Gravitational lattices in classical void space. ....  | 2-13       | 2.10.1 Electrical charge and electrical field ..  | 2-46 |
| 2.6.1. Types and general properties of the gravitational lattices .....                              | 2-13       | 2.10.2 Interaction between particles, possessing a charge. ....   | 2-48 |
| 2.6.4 Boundary and interface layers .....  | 2-18       | 2.10.3. Node quasisphere behavior in a permanent magnetic field .....   | 2-50 |
| 2.7. Helical structures and ordered systems ..   | 2-19       | 2.10.4 Quantum electromagnetic wave .....   | 2-52 |
| 2.7.A Identification of the atomic and subatomic particles .....                                     | 2-23       | 2.10.5 Boundary conditions for the wave equation .....  | 2-61 |
| 2.7.A.2 Primary particles. Identification of atomic and subatomic particles. ....                    | 2-23       | 2.10.6 Propagation of quasiparticle waves (virtual particles). ....   | 2-62 |
| 2.7.A.2.1 Electron system (electron structure) 24  |            | 2.10.7. Gamma rays as a bunch of quantum waves .....  | 2-65 |
| 2.7.A.2.2 Protoneutron and its internal structure. Conversion to proton or neutron. ....             | 2-24       | 2.10.8 Trapping mechanism of rectangular lattice inside the helical structures. ....  | 2-66 |
| 2.8 Modified rectangular lattice in the internal space of the helical structures .....               | 2-26       | 2.11 Light velocity in CL space .....   | 2-69 |
| 2.8.1 General features .....   | 2-26       | 2.11.3 Light velocity equation and relation between the CL space parameters and the fundamental physical constants. ....                | 2-75 |
| 2.8.2 Trapping hole. ....  | 2-28       | 2.12 Relation between the intrinsic and the inertial mass of the CL node. ....  | 2-81 |
| 2.8.2.A. Stiffness of internal RL structure and its influence on the external structure radius ..... | 2-28       | 2.13 Physical meaning of the Planck's constant, by using the basic parameters of CL space..   | 2-81 |
| 2.8.3 Helical structures in different space environments .....                                       | 2-29       | 2.13.A. ZPE uniformity and CL space relaxation time constant.....   | 2-82 |
| 2.8.4 Helical structure with internal RL in a classical void space .....                             | 2-32       | 2.14. Basic measurable parameters of the CL space. ....   | 2-85 |
| 2.8.5 Intrinsic mass contained in the first order helical structure with internal lattice.....       | 2-32       | 2.15. Gravitational law in CL space .....   | 2-87 |
| 2.8.6. Mixed rectangular lattice in a spherical space .....  | 2-32       |   |      |
| 2.9 Dynamic property of the Cosmic Lattice ..  | 2-33       |   |      |
| 2.9.1 Node configuration of CL structure .....   | 2-34       |   |      |
| 2.9.1.1 Conditions for stable lattice .....  | 2-34       |   |      |
| 2.9.2 Node oscillations described by vectors. ....   | 2-37       |   |      |
| 2.9.3 Resonance frequency stabilization .....  | 2-38       |   |      |
| 2.9.3.1 Weak stabilization mechanism .....   | 2-39       |   |      |

## CONTENTS

|  |  |
|--|--|
| <p>2.15.0. Mass - energy - charge equivalence principle. ....2-88</p> <p>2.16 Confined motion of the helical structures in CL space. ....2-91</p> <p>2.17 Basic CL space parameters and connections to some fundamental properties of matter.....2-93</p> <p><b>Chapter 3. Electron. Structure and physical parameters .....3-1</b></p> <p>3.1 Electron structure and basic features.....3-1</p> <p>3.2 Electron oscillations and lattice pumping effect leading to a photon emission. ....3-5</p> <p>3.3 Confined motion of the electron. Electron spin. ....3-7</p> <p>3.4 Electrical field of the electron at confined motion .....3-8</p> <p>3.5 Dynamical properties of the electron in confined motion .....3-12</p> <p>3.6 Dimensions of the electron. ....3-16</p> <p>3.7 Interaction between the moving electron and the external electrical field .....3-18</p> <p>3.8 Interaction between a moving electron and an external magnetic field .....3-18</p> <p>3.9 Quantum motion at optimal and suboptimal velocities. Quantum velocities. ....3-19</p> <p>3.10 Magnetic moment, gyromagnetic factor and Quantum mechanical spin of the moving electron .....3-25</p> <p>3.11 Quantum magnetic radius of electron....3-27</p> <p>3.11.A. Relativistic motion of electron. Relativistic gamma factor and quantum efficiency. ....3-31</p> <p>3.12 Quantum loops and orbits .....3-33</p> <p>3.12.1 Quantum loop conditions .....3-33</p> <p>3.12.2 Quantum loops and orbits for electron with an optimal confined velocity. Embedded signature of the fine structure constant. ....3-34</p> <p>3.12.2.A. Quantum orbits and time duration for a stable orbit .....3-38</p> <p>3.12.3 Quantum loops and orbits, for electron with any suboptimal quantum velocity .....3-39</p> <p>3.13 Estimation of basic CL space parameters by the parameters of the electron system. Derivation of the mass equation. ....3-40</p> <p>3.13.1 Physical interpretation of inertial mass ratio .....3-40</p> <p>3.13.2 Relation between CL node displacement from FOHS and the Broglie wavelength .....3-41</p> | <p>3.13.3 Static CL pressure and apparent (Newtonian) mass of the helical structures .....3-41</p> <p>3.13.4. Physical nature of inertia and inertial mass .....3-44</p> <p>3.14. Free positron. Newtonian mass and Planck's constant estimated by its motion in CL space.3-45</p> <p>3.15 Dynamic pressure of CL space .....3-45</p> <p>3.16 Scattering experiments for electron and positron from the point of view of the BSM theory. ....3-46</p> <p>3.17 Positronium .....3-47</p> <p><b>Chapter 4. Superconductive state of the matter. ....4-1</b></p> <p>4.0 CL space inside of a solid body .....4-1</p> <p>4.1. Normal and superconductive operational mode of CL node. ....4-2</p> <p>4.2 The electron system configurations in superconductive environments .....4-5</p> <p>4.3. Integer and Fractional Quantum Hall Effect experiments. ....4-10</p> <p>4.4 QHE and FQHE experiments as examples of active control of light velocity in a sample ....4-13</p> <p>4.4.1 General considerations .....4-13</p> <p>4.4.2 Signature of the oscillating electron in the Integer quantum Hall effect .....4-20</p> <p>4.4.3 Signature of the SC electron in FQHE .4-20</p> <p>4.4.4 Signature of the stacked SC electrons.. 4-21</p> <p>4.4.5 Scanning the sample SPM frequency and invoking a synchronized quantum effect .....4-21</p> <p>4.4.6 The plateau width as a signature of direct interaction between the moving carriers and the quantum conditions .....4-22</p> <p>4.4.7. Theoretical simulation of a holding effect in the SPM frequency synchronization .....4-23</p> <p>4.4.8 Signature of the SPM vector behavior around the critical energy level <math>E_{c2}</math>. ....4-25</p> <p>4.4.9 Signature of the positron in FQHE .....4-25</p> <p>4.4.10 Summary and conclusions .....4-29</p> <p><b>Chapter 5. Energy of the Physical Vacuum. Hidden space energy. ....5-1</b></p> <p>5.1. Zero point energy of CL space and its relation to the Cosmic Background Radiation .....5-2</p> <p>5.2. Derivation of expressions about CL space background temperature. ....5-2</p> |
|--|--|

## CONTENTS

|  |  |
|--|--|
| 5.3. CL space background temperature expressed by the parameters of CL space. ....5-4  | 6.12.2 Cross calculation method for accurate determination of the proton dimensions .....6-40                          |
| 5.4. Considerations for breakdown of the equivalence principle at internode range distance. ....5-4                                  | 6.12.3 Experimental confirmation about the theoretically determined proton dimensions.....6-44                         |
| 5.5. Hidden space energy .....5-5  | 6.13 Neutron .....6-45   |
| <b>Chapter 6. Structure of the elementary particles. ....6-1</b>   | 6.13.1 Neutron. Envelope shape and confined motion .....6-46   |
| 6.1 Atomic and subatomic particles. Conversion processes. ....6-1  | 6.13.2 Neutron-proton conversion and virtual particles .....6-46   |
| 6.2 Virtual particles (waves) .....6-4   | 6.13.3 Neutron in Deuteron .....6-48   |
| 6.3 Neutrino particles .....6-4  | 6.13.4 Neutrons in Tritium .....6-48   |
| 6.4 High energy particle collision .....6-5  | 6.13.5 Neutron magnetic moment .....6-48   |
| 6.4.1 Braking of the proton and neutron .....6-5   | 6.14. Nuclear binding energy .....6-49   |
| 6.4.2 Identification of internal structures of the proton (neutron) .....6-5   | 6.14.1 Binding energy between the proton and neutron in the Deuteron system. ....6-50                                  |
| 6.4.3 Pions and their decay. ....6-7   | 6.14.2 Estimation of the distance between the neutrons in the nucleus of Tritium .....6-52                             |
| 6.4.4 Experimental evidence for muon shape 6-9   | 6.14.3 Role of the SG(TP) field in the spatial order of hadrons in the atomic nucleus .....6-53                        |
| 6.5 Neutral pion .....6-13   | 6.15 Neutrino particle classification .....6-53  |
| 6.6 Infinities in the Feynman diagrams. ....6-14   | <b>Chapter 7. Hydrogen atom .....7-1</b>   |
| 6.7 Eta particle .....6-14   | 7.1 Proton as a nucleus of the Hydrogen atom 7-1   |
| 6.8. “Antiproton” .....6-14  | 7.2 Bohr surface of the Hydrogen atom .....7-1   |
| 6.9 High energy particle collision .....6-15   | 7.3 Coulomb force inside the Bohr surface ....7-4  |
| 6.9.1 High energy collision between electron and positron ( $e^+e^-$ high energy reaction). ....6-15                                 | 7.4 Orbital planes for the Hydrogen series.....7-5   |
| 6.9.3 SG energy embedded in the helical structures and “electroweak forces”. ....6-18  | 7.5 Effect of the orbiting electron on the atomic motion in CL space. ....7-7  |
| 6.9.4 Theoretical analysis of the embedded SG energy in the elementary particle .....6-21  | 7.6 Quantum motion of the electron in electrical field. Quasishrunk CL space. ....7-8                                  |
| 6.9.4.1 Theoretical consideration .....6-22  | 7.7 Quantum orbit conditions for orbits inside the Bohr surface. ....7-9   |
| 6.9.4.2.1 Asymmetrical reaction of the CL space .....6-26  | 7.8 Model of the Balmer series .....7-13   |
| 6.9.4.3. Identification of the particle structure by the embedded SG energy released in the particle collision experiments .....6-29 | 7.9. Photon emission and absorption. Physical explanation of the uncertainty principle. ....7-21                       |
| 6.9.4.4 The real newtonian mass of the kaon 6-32   | 7.10 Fine structure line splitting .....7-22   |
| 6.9.4.5 Fermi coupling constant and effective mixing ratio for “leptons”- signatures of the helical structure twisting .....6-33     | 7.11 Pauli exclusion principle. Magnetic fields inside the Bohr surface. ....7-23                                      |
| 6.10 Physical explanation of the Newtonian gravitation and inertia of the elementary particles .....6-34                             | 7.12 Superfine spectral line structure .....7-24   |
| 6.11. Physical dimensions and structure of the proton and neutron. ....6-38  | 7.13 Lamb shift .....7-24  |
| 6.12 Proton. Structure and physical dimensions .....6-38   | 7.14 Zeeman and Stark effects. ....7-24  |
|  | 7.15 Cross validation of the Hippoped curve concept, used for the shape of the proton and the quantum orbits. ....7-25 |
|  | <b>Chapter 8. Atomic Nuclear Structures</b>  |
|  | 8.1 The Quantum Mechanical models of the atoms are only mathematical models .....8-1                                   |

## CONTENTS

|   |            |  |       |
|---|------------|--|-------|
| 8.2 BSM concept about the atomic structure..  | 8-2        | 9.5.3 Characteristic features of the molecular oscillations .....  | 9-12  |
| 8.3 Atlas of Atomic Nuclear Structures .....  | 8-3        | 9.5.4 BSM concept about the oscillations of the molecules with EB type of bonds .....  | 9-13  |
| 8.3.1 Building rules of the atomic nuclei, related to Z number .....                        | 8-3        | 9.5.5. Molecules with I-st type oscillations....   | 9-17  |
| 8.3.2 Natural forces defining the build-up trend of the atomic nuclei of the elements ..... | 8-3        | 9.5.5.1. H <sub>2</sub> ortho-I state as a simplest diatomic molecule .....  | 9-17  |
| 8.3.4 The formulated rules must comply to the following: .....                              | 8-4        | 9.5.6 Approximate calculation of the system energy in the equilibrium state .....  | 9-19  |
| 8.3.5 Useful data for unveiling the nuclear structure .....                                 | 8-4        | 9.5.7 Experimental evidence about the BSM concept of molecular vibrations .....  | 9-19  |
| 8.3.6 Type of bonds in the atomic nuclear structure .....                                   | 8-4        | 9.5.8. Mechanism of the Raman scattering and rotational Raman spectra according to BSM   | 9-25  |
| 8.3.7 Basic rules in the process, leading to build-up of stable isotopes. ....              | 8-4        | 9.6 Vibrational bands of H <sub>2</sub> ortho-I state.....   | 9-26  |
| 8.3.8 Discussion about the basic rules .....  | 8-6        | 9.7. Theoretical analysis of H <sub>2</sub> ortho-I molecule oscillations .....  | 9-28  |
| 8.3.9. Atomic nuclear build-up trends .....   | 8-10       | 9.8 D <sub>2</sub> ortho-I molecule as a single valence bonding system in the molecules. ....  | 9-35  |
| 8.4 Experimental data supporting the unveiled atomic nuclear structures .....               | 8-13       | 9.9 Interactions in quantum quasishrunk space  | 37    |
| 8.5 First ionization potential .....  | 8-20       | 9.10. Discussion about the bonding energy at equilibrium and the rotational constants of H <sub>2</sub> and D <sub>2</sub> molecules. .... | 9-41  |
| 8.6. Atoms at different aggregate state of the matter .....                                 | 8-21       | 9.11. H <sub>2</sub> para molecule as a most simple example of diatomic homonuclear molecule with a quasirotational vibration .....        | 9-41  |
| 8.7. Nuclear magnetic resonance applied for atomic element .....                            | 8-24       | 9.13. Molecules (or fractions of molecules) with II-nd type of oscillations. ....  | 9-42  |
| 8.8. Giant resonance .....  | 8-25       | 9.14. Information about the molecular configuration, using the photoelectron spectrum .....  | 9-43  |
| 8.9 Scattering experiments .....  | 8-25       | 9.15. SG energy balance for system of diatomic homonuclear molecule .....  | 9-44  |
| 8.10 Three dimensional view of the atomic nucleus .....                                     | 8-26       | 9.16. Oxygen molecule in different states...   | 9-48  |
| 8.11 Electron series in the atoms at larger Z number .....                                  | 8-27       | 9.17. NH <sub>3</sub> molecule .....   | 9-51  |
| 8.12 Spin orbit interaction .....   | 2-27       | 9.18 Molecules with folded vibrational-rotational spectra .....  | 9-52  |
| 8.13 Identification of orbits according to QM notation .....                                | 8-28       | 9.19 CO <sub>2</sub> molecule .....  | 9-53  |
| 8.14 Ions .....   | 8-30       | 9.20. Water molecule .....   | 9-54  |
| 8.15 Some aspects of photon emission and absorption .....                                   | 8-32       |  |       |
| 8.16 Ferromagnetic hypothesis .....   | 8-33       |  |       |
| <b>Chapter 9. Molecules .....</b>   | <b>9-1</b> |  |       |
| 9.1 Type of chemical bond .....   | 9-1        |  |       |
| 9.2 Theoretical modeling of chemical compounds .....  | 9-2        |  |       |
| 9.3 Concept of integrated Bohr surfaces .....   | 9-5        |  |       |
| 9.4 Molecular spectra as a signature of molecular oscillations.....                         | 9-6        |  |       |
| 9.5 Molecular oscillating model of BSM .....  | 9-8        |  |       |
| 9.5.1 General considerations and features .....   | 9-8        |  |       |
| 9.5.2 CL space pumping and radiation (absorption) capability of a bonding electron system   | 9-11       |  |       |
|   |            | <b>Chapter 10 Time, Inertia and Gravitation 10-1</b>   |       |
|   |            | 10.1 Origin of time .....  | 10-1  |
|   |            | 10.2 Inertia .....   | 10-2  |
|   |            | 10.3. Inertial interactions of the atomic matter in CL space .....   | 10-5  |
|   |            | 10.4 Theoretical analysis of inertia in CL space. Partial CL pressure and force moment .....   | 10-11 |
|   |            | 10.5 Using the concept of the local CL space and ESS for massive objects .....   | 10-20 |

## CONTENTS

|  |       |
|--|-------|
| 10.6 Total energy balance of moving macrobody .....  | 10-21 |
| 10.6.1 Force moment of real body in a free fall motion .....   | 10-22 |
| 10.6.2 Anomalous position of Mercury in the plot of the ratio $kE$ as a function of mean radius 10-24                                |       |
| 10.6.2.A. Theoretical concept for dynamical equilibrium of moving astronomical object in CL space. ....                              | 10-25 |
| 10.6.5 Energy involved in the motion of astronomical object in gravitational CL space .....  | 10-26 |
| 10.9 Mass grow of astronomical body by matter accumulation. ....   | 10-30 |
| 10.12. Interactions between the folded nodes and the planetary atmosphere. ....  | 10-31 |
| 10.14 Magnetic field hypothesis (for astronomical objects) .....   | 10-34 |
| 10.15 Physical explanation of the phenomena of General Relativity: .....   | 10-36 |
| 10.16 Special relativistic phenomena .....   | 10-37 |
| 10.16.1 Mass increase at relativistic velocity.....  | 10-37 |
| 10.16.2. Relation between the concept of inertial frame (according to SR) and the concept of local CL space (according to BSM) ..... | 10-37 |
| 10.17. Coriolis force .....  | 10-38 |

### Chapter 11. Biomolecules, bioenergy and DNA intercommunication

|  |       |
|--|-------|
| 11.1. New method for analysis of biomolecules with identified structure and composition. ....  | 11-1  |
| 11.1. General considerations .....   | 11-1  |
| 11.2. Ring atomic structures in organic molecules. ....  | 11-2  |
| 11.3 Weak hydrogen bonds .....   | 11-4  |
| 11.4. Hypothesis of energy storage mechanism in molecules possessing ring atomic structures..  | 11-4  |
| 11.5 Hypothesis of energy flow through the chain structure of the biomolecule. ....  | 11-5  |
| 11.6. Hypothesis about the role of DNA in the cell cycle synchronization mechanism .....   | 11-11 |
| 11.7. Established features and experimental results supporting the hypothesis of DNA involvement in a cell cycle synchronization ..... | 11-17 |
| 11.8. Hypothesis of decoding process in some of the complex aminoacyl-tRNA synthetases - tRNA. ....                                    | 11-19 |

### Chapter 12. Alternative Cosmology. Stationary Universe and Galactic Cycle .....

|   |       |
|---|-------|
| 12.A.1. Introduction .....  | 12-1  |
| 12.A.2. Weak points of Big Bang concept ....  | 12-2  |
| 12.A.3. Introduction into the BSM concept about the Universe: .....   | 12-3  |
| 12.A.4. Low level structural organization of the intrinsic matter .....   | 12-4  |
| 12.A.4.3 Super Gravitation and mass-energy balance of the primordial matter .....                                   | 12-10 |
| 12.A.5. Formation of upper order congregations in the surface region of the bulk matter. ....                       | 12-14 |
| 12.A.5.3. Hypothesis of embedded fine structure constant in the lower level structures of matter organization ..... | 12-16 |
| 12.A.6. Super Gravitational Constant .....  | 12-19 |
| 12.A.8. Processes of primordial bulk matter of two substances leading to eruption .....                             | 12-23 |
| 12.A.9. Prisms formation .....  | 12-26 |
| 12.A.10. Summary about important structural features and processes at the lower level of matter organization .....  | 12-28 |
| 12.A.11. Protogalactic egg and phases of its internal evolution. ....   | 12-28 |
| 12.B. BSM concept of stationary universe ..   | 12-37 |
| 12.B.1 Recycling and incubation phases ....   | 12-38 |
| 12.B.2. Galaxy collapse .....   | 12-38 |
| 12.B.3. Preservation of the information about the prism's matter quantity and handedness .....                      | 12-39 |
| 12.B.4 Variation of diameter to length ratio parameter for prisms from different recycles ....                      | 12-40 |
| 12.B.4.1 Condition for interconnection between CL spaces from different galaxies and galactic recycles .....        | 12-40 |
| 12.B.4.2 Origin of the Cosmological redshift .....  | 12-40 |
| 12.B.4.3 Summary .....  | 12-47 |
| 12.B.5. Phenomena indicating a death (collapse) or a birth of a galaxy in the Universe .....                        | 12-47 |
| 12.B.5.1 GRB without optical counterpart ..   | 12-48 |
| 12.B.5.2 GRB with an optical counterpart ..   | 12-49 |
| 12.B.5.3 Phase of CL space formation. Hypothesis of transition type of CL space. ....                               | 12-51 |
| 12.B.5.4 The observable Universe - a conglomeration of galaxies with interconnected space                           | 12-55 |
| 12.B.5.5 Galactic nucleus during the phase of recycling and incubation .....  | 12-55 |
| 12.B.6 Active galactic life .....   | 12-57 |

## CONTENTS

|  |   |
|--|---|
| <p>12.B.6.1 Some features of evolution after the explosion of the protogalactic egg .....12-57</p> <p>12.B.6.2. Galaxy rotational problem .....12-61</p> <p>12.B.6.3 Some features in the processes of star formations and their evolution .....12-63</p> <p>12.B.6.4 Pulsars .....12-69</p> <p>12.B.6.4.1 Birth of pulsar .....12-70</p> <p>12.B.6.4.2. Idealized model .....12-71</p> <p>12.B.6.4.3 Pulsar's features .....12-72</p> <p>12.B.6.4.4 Energy radiation process and period stabilization .....12-73</p> <p>12.B.6.4.5 Factors involved in the pulsar period stabilization .....12-75</p> <p>12.B.6.4.6 Integrated pulse profile and drifting subpulses .....12-77</p> <p>12.B.6.4.7 Real kaon nucleus .....12-78</p> <p>12.B.6.4.8 Proper motion of the pulsar .....12-80</p> <p>12.B.6.4.9 Pulsars with two opposite jets ... 12-81</p> <p>12.B.6.4.10. Long relaxation time constant of the pulsar and its signature .....12-82</p> <p>12.B.6.5 Star evolution termination options: a black hole, a binary pulsar, or a supernovae 12-83</p> <p>12.B.7. Remnants from the previous galactic life .....12-87</p> <p>12.B.7.1 Theoretical concept .....12-87</p> <p>12.B.7.2 Observational data analysis.....12-89</p> <p>12.B.7.3 Summary: .....12-91</p> <p>12.B.7.4 Conglomeration of remnants from the previous galactic life .....12-91</p> <p>12.B.7.5 Effect of Globular Cluster (GC) detectability in distant galaxies .....12-92</p> <p>12.B.7.6 Energy loss effect of GC .....12-93</p> <p>12.B.8 Interacting galaxies .....12-93</p> <p>12.B.9 Cosmological anisotropy. ....12-94</p> <p>12.B.10 Crab nebular and pulsar .....12-94</p> <p>12.B.11 Quasars .....12-95</p> <p>12.B.12 Lyman Alpha Forest .....12-97</p> <p>12.B.13 Estimation of cosmological distances .....12-98</p> <p>12.B.13.1 General considerations .....12-98</p> <p>12.B.13.2 Lyman alpha forest method .....12-98</p> <p>12.B.13.3 Theoretical concept of the Universe optical inhomogeneity .....12-99</p> <p>12.B.13.4 Existing methods for determination of cosmological distances independently from the concept of the expanding Universe. ....12-100</p> <p>12.B.13.5 Controversial interpretation of the Hubble law. Recent experimental results...12-101</p> | <p>12.B.13.6 New interpretation of the Hubble law. ....12-102</p> <p>B. Derivation of the Hubble law from a BSM point of view .....12-102</p> <p>12.B.13.7 Observational evidence about the inhomogeneity of the Universe .....12-103</p> <p>12.B.14. Stability of the Cosmic Lattice structure .....12-105</p> <p><b>Chapter 13. Potential and special applications of the BSM theory. New opportunities for space travels. 13-1</b></p> <p>13.1 Brief summary of advantages of BSM ..13-1</p> <p>13.2 Theoretical achievements in support of emerging practical applications .....13-2</p> <p>13.3. Potential applications in different fields of natural science .....13-4</p> <p>13.4. Special applications .....13-5</p> <p>13.4.1. Hidden Space Energy .....13-5</p> <p>13.4.2. How the ZPE-S energy is accessible by the nuclear reaction? .....13-6</p> <p>13.4.3. Alternative methods for accessing the hidden space energy .....13-7</p> <p>13.5. Control of the gravitation and inertia of a solid object .....13-10</p> <p>13.6. Spacecraft based on a new propulsion mechanism .....13-12</p> <p>13.7. Physical effects accompanied the described propulsion mechanism .....13-14</p> <p>13.8. Comparison between BSM predictions and observed physical phenomena .....13-14</p> <p>13.9. Supercommunication .....13-15</p> <p>13.10. Opportunity for interplanetary and interstellar flights .....13-16</p> <p><b>Atlas of Atomic Nuclear Structures (ANS)...A</b></p> <p><b>Periodic Table of Atomic Nuclei .....B</b></p> <p><b>Appendix to Chapter 2 .....C</b></p> <p><b>Appendix New vision about fusion.....D</b></p> <p><b>Appendix Derived Equations .....E</b></p> <p><b>References .....F</b></p> <p><b>About the author .....G</b></p> |
